Profile

third-year AI & Data Science engineering student with hands-on experience building end-to-end AI systems across finance, recruitment, and predictive analytics. Skilled in transforming complex data into actionable insights and delivering scalable solutions. Seeking an engineering internship to contribute to impactful AI and analytics projects.

Education

Engineering Degree in Artificial Intelligence & Data Science **2024 – Present**
TEK-UP University, Tunisia
Coursework: Machine Learning, Statistics, Optimization, Databases, Generative AI

Experience

Full-Stack AI Developer Intern — Vermeg **2026**
CHRONOS · Employee Time, Cost & Allocation Intelligence Platform React/Vite · Spring Boot · Keycloak · PostgreSQL

- Designed a full-stack workforce intelligence platform tracking employee allocation and generating three-month cost forecasts using OLS regression with 95% confidence bands across companies and organisational units
- Built an anomaly detection engine identifying four operational risk types and implemented role-based access control via Keycloak OAuth2 serving Admin, Finance Officer, and Product Manager dashboards with dual CSV export

Projects

DUALIS — AI Financial Lending Platform (2025) .NET ML.NET SQL Server Generative AI

- Built a predictive ML model to assess loan eligibility and risk based on applicant financial profiles
- Integrated generative AI to produce transparent, human-readable explanations for lending decisions

UNIVIOO — AI CV & Recruitment Platform (2025) Django NLP TF-IDF LLM API React

- Built a matching engine using TF-IDF and cosine similarity for candidate–opportunity alignment
- Integrated a generative AI chatbot for personalized career guidance within a modular multi-stakeholder system

waveAI — Ocean Intelligence Platform (2026) Python PyTorch Scikit-learn Django Streamlit

- Built deep learning & ML models (LSTM Autoencoder, Random Forest) for storm detection and ocean forecasting
- Applied SHAP explainability across satellite and oceanographic data sources to enhance model transparency

Retail Store Sales Forecasting — Time Series Analysis (2026) Python LightGBM XGBoost Scikit-learn Plotly

- Engineered temporal features (paydays, weekends, holiday flags) and trained LightGBM & XGBoost models with TimeSeriesSplit cross-validation
- Delivered interactive visualizations (Plotly, Seaborn) revealing seasonal trends, store-type performance, and macroeconomic correlations

Technical Skills

Programming	Python, SQL, C#, JavaScript
ML / DL	Scikit-learn, PyTorch, ML.NET
MLOps	MLflow, Docker, Git, DVC, CI/CD
Data & BI	Pandas, NumPy, Matplotlib, Power BI, Streamlit
Frameworks	Django, ASP.NET Core, Spring Boot, React
Tools	Git, Docker

Certifications

Azure AI Fundamentals (Microsoft) | Generative AI with Diffusion Models (NVIDIA) | Deep Learning Fundamentals (NVIDIA) | Prompt Engineering (Udemy)

Languages & Activities

Arabic — Native English — Fluent French — Fluent German — Beginner

Participant — Digital Future 6.0 Conference titled “Data Literacy” — attended workshops by foreign professors, engaged with international participants

Participant — IEEE GODS Competition Hackathon
